                                                                                                                                                                                                                               Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPGI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Center project name: L3654

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr22
During sequence assembly data is compared from overlapping clones. Where differences are found these annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em: FMBL; Sw: SWISSPROT; Tr:, TREMBL; Mp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP5-1104E15 is from the library RPCI-5 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://Dacpac.med.buffalo.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HS1104E15 112460 bp DNA PRI 12-DEC-1999
Human DNA sequence from clone RP5-1104E15 on chromosome
22q12.3-13.1 Contains the MGAT3 gene for mannosyl
(beta-1.4-)-glycoprotein beta-1.4-N-acetylglucosaminyltransferase,
the gene for a predicted protein, the ATF4 gene for activating
transcription factor 4 (tax-responsive enhancer element B67) and
the 5 end of the CACNAII gene for voltage-dependent calcium
channel, alpha-11 subunit. Contains ESTs, STSs, GSSs and five
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk numquery@sanger.ac.uk Clone Nay 28, 1999 this sequence version replaced gi:4902589. This sequence has been finished according to sequence map crite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               between neighbouring submissions.

The true left end of clone RP5-1104E15 is at 1 in this sequence. The true left end of clone CTA-206C7 is at 112356 in this sequence. The true right end of clone RP3-407F17 is at 83950 in this sequence. The end of this sequence overlaps with sequence AL0087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IMPORTANT: This sequence is not the entire insert of clone RP5-1104E15 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   annotated human repeat sequence elements (e.g. Alu). sequence is ambiguous, there is an annotation using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Barlow, K.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;

                                                                                                                                                                                                                                      Produce protein hydrolysates enriched in particular amino acids, produce protein hydrolysates, e.g. in doughs

Claim I; Fig 1; 77pp; English.

The present sequence encodes dippetidyl aminopeptidase (DPAP) from Aspergillus oryzae. DPAP acts synergistically with an aminopeptidase (AP) to hydrolyse polypeptides, producing protein hydrolysate (PH), cuseful in foods as flavour enhancer, e.g. in baked goods, enriched in: (a) Ala, Arg, Asp, Gly and/or val, or (b), if the substrate has been deamidated, in Glu (free and/or peptide bound), in which case products are useful as animal feed additives. DPAP can also be used in flavour-improving compositions (optionally containing AP) and in dough pre-mixes, also for deactivating enzymes and for converting precursors to mature proteins. DPAP increases the level of hydrolysis of proteins and thus of flavour development, and a mixture with AP may hydrolyse tripeptides that are resistant to either enzyme used alone. PH have improved solubility, emulsifying and foaming properties, and products containing and animal properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0 000000
